AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

Original claims 1-6 (cancelled)

Claim 7 (new): A liquid storage container comprising:

a container body having a liquid storage portion for containing liquid therein; and an instilling portion for allowing the liquid to flow out in an opened stage,

wherein the container body includes an aerating device provided at the bottom thereof and having a filter element and a check valve for allowing ambient air to flow in from the outside and preventing the liquid from flowing out.

Claim 8 (new): The liquid storage container as defined in claim 7, wherein the aerating device has a receiving portion contacting a floor surface and supporting the container body.

Claim 9 (new): The liquid storage container as defined in claim 7, wherein a bottom cap is provided for covering the aerating device.

Claim 10 (new): The liquid storage container as defined in claim 8, wherein the bottom cap is provided for covering the aerating device.

Claim 11 (new): The liquid storage container as defined in claim 9, wherein the bottom cap is formed integrally with the container body to be separable from the container body.

In Reply to USPTO Correspondence of N/A Attorney Docket No. 0388-061892

Claim 12 (new): The liquid storage container as defined in claim 10, wherein

the bottom cap is formed integrally with the container body to be separable from the container

body.

Claim 13 (new): The liquid storage container as defined in claim 7, wherein

the check valve has a duck-bill type construction including a pair of plate-shaped portions

contactable with each other at end portions thereof, and is closed when the pair of plate-shaped

portions contact each other at the end portions thereof or opened when the pair of plate-shaped

portions are moved away from each other at the end portions thereof.

Claim 14 (new): The liquid storage container as defined in claim 8, wherein

the check valve has a duck-bill type construction including a pair of plate-shaped portions

contactable with each other at end portions thereof, and is closed when the pair of plate-shaped

portions contact each other at the end portions thereof or opened when the pair of plate-shaped

portions are moved away from each other at the end portions thereof.

Claim 15 (new): The liquid storage container as defined in claim 7, further

comprising a cap attachable to the container body and including an opening member for opening

the instilling portion in an unopened stage and a valve member for allowing the liquid to flow out

and preventing ambient air from flowing into the container.

Claim 16 (new): The liquid storage container as defined in claim 8, further

comprising a cap attachable to the container body and including an opening member for opening

the instilling portion in an unopened stage and a valve member for allowing the liquid to flow out

and preventing ambient air from flowing into the container.
